NexAir Avionics the First to Install G500H in a Bell 206 Helicopter, in the Northeast

Garmin's Newest G500H for Helicopters

Engineered for safety and reliability in today's helicopter environment, Garmin's G500H **dual-screen electronic flight display, Primary Flight Display (PFD) and Multi-Function Display (MFD)** capabilities right in front of you for easy scanning and interpretation, provides an affordable flight solution that meets the needs of the most demanding helicopter missions. Specially adapted to the needs of helicopter operators, Garmin's HSVT™ (**Helicopter Synthetic Vision Technology**) brings a powerful graphical perspective to the

G500H. Available as an option, HSVT can make a world of difference when visibility is less than ideal. That's not all! **HTAWS** (Helicopter Terrain Awareness and Warning System) navigator is installed and interfaced to the G500H, certified "forward looking" terrain avoidance (FLTA) capability is available which predicts in advance where potential hazards may exist. **Traffic Information Service (TIS)** alerts on your G500H, simply by adding a [GTX 330](#) Mode S transponder. Or, you can select from available TAS and TCAS systems, including Garmin's [GTS](#)™ family of advanced traffic surveillance products.
